Israel Escobar-Camacho

+1 312 678 9737 | iescobar@andrew.cmu.edu | linkedin.com/israel-e-c | Chicago, IL, US | Spanish & English

Education

Carnegie Mellon University — Pittsburgh, PA
B.S in Electrical & Computer Engineering — *Sep 2019 – May 2024*
M.S in Electrical & Computer Engineering — *Janurary 2024 – May 2025*

- **Relevant Coursework:** Introduction to Computer Systems, Structure and Design of Digital Systems, Logic Design and Verification, Computer Systems and Hardware-software interfaces Introduction to Embedded Systems, Computer Architecture
- **Scholarships:** Tarten Scholar, Renaissance Scholar, Chicago Scholar

Skills

Languages: C/C++, SystemVerilog, RISC-V ISA, x86-64 ISA, Bash, Python, TCL Scripting

Technologies: Intel Pin, Git/Github, Quartus, GDB, Linux, Windows Vista/8.1/10, MacOS X, UNIX

Work Experience

Intel — Hillsboro, OR
Pre-silicon IP Validation Intern — *May 2023 – August 2023*

- Developed and refactored dynamic Python scripts for new infastructures to support my team efforts
- Self-taught architectural and design knowledge for applying my skills throughout advancing current validation practices

Carnegie Mellon University — Pittsburgh, PA
Teacher Assistant — *Summer 2022*

- Supported collaborative learning during lab and instruct recitations varying from 4 to 15 students
- Taught topics ranging from data structures, correctness in C, to big-O time efficency
- Held office hours to support students 1-on-1, including review sessions for larger groups

Research Experience

Carnegie Mellon Univ. Department of Electrical & Computer Engineering — Pittsburgh, PA
Undergraduate Researcher — *Janurary 2023 – May 2023*

- Dealt with TCL scripting with the Cadence toolset for synthesizing and performance analyzation
- Worked on ISCAS files and SOP simplification and optimizations through python scripting
- Developed Bash and Python scripts are data analysis and automation

Carengie Mellon Univ. Department of Mechanical Engineering — Pittsburgh, PA
Undergraduate Researcher — *September 2023 – Current*

- Troubleshooted C-based firmware for flashing a STM32 processor on a Custom PCB design
- Developed communication protocols with UART for our chemical sensor EmStat Pico Module

Projects

Real-Time Kernel

- Developed a mult-threaded Real Time Operating system for a STM32 processor with enforced fixed priority scheduler
- Utilized GDB to step through out x86-64 instructions for my C code and trace assembly code
- Used MMIO to build upon the UART and I2C Drivers for communication between arduino, LEDs, and other electronics

Branch Predictors

- Implemented branch predictors, meant for computer infrastructures, in C++ code to test efficiency
- Used Pin to run these branch predictors on simulated computer processes given by SPEC2017
- Utilized results, specially picked with Pin, to analyze the efficency and report our discoveries (making claims with our data collected)
